

After many, many years of enduring the awfulness that is commercial radio, I decided to spend some of my hard earned money to be able to enjoy satellite radio. As a subscription service, it is the listeners who decide the content of the broadcast, as opposed to traditional radio where large record companies dictate what listeners hear. NAB's petition 04-160 is a blatant attempt to stifle competition. To further consider it or HR 4026 would be a slap in capitalism's face. Where would we be today if radio broadcaster's had succeeded in their attempt to squash television in the 1940's? I believe the Legislative Branch of the United States' government has much bigger issues to focus its attention on. The economy? The environment? Protecting its citizens? Toss the NAB out on its ear and get back to managing this great country!
